

DECISIONOS

THE OPERATING BRAIN FOR FOUNDER-LED BUSINESSES

Speak the decision. **We run** the company.

The AI operating system that remembers every decision, organises every task, and executes the way your business actually runs.

VISION DOCUMENT

DECISIONOS.BIZ • 2026

Your business lives inside your head. That's the risk.

Every growing company runs on the founder's memory. A decision in a corridor. An approval over WhatsApp. A bill on someone's phone. It works — until it doesn't.

How chaos creeps in

- › **Decisions evaporate.** Said once, forgotten by Friday. No owner, no due date, no trace.
- › **Work scatters.** Tasks live across WhatsApp, notebooks, calls and spreadsheets — nowhere and everywhere.
- › **Nothing is provable.** "I told him to do it." "It's done." Neither can be checked.
- › **You are the bottleneck.** Every follow-up, approval and "what's the status" routes back to you.
- › **Memory walks out the door.** When a key person leaves, the context leaves with them.

THE OLD WAY

Founder remembers → tells someone → hopes it happens → chases → repeats.

THE DECISIONOS WAY

Founder speaks → AI captures, assigns, tracks, chases, and remembers it forever.

One sentence. A company-wide rule, enforced.

DecisionOS doesn't just make to-dos. Speak an operating decision and it reshapes how the whole business runs — instantly.

SECOND 0 — THE OWNER SPEAKS

"From today, stop any dispatch that doesn't have payment approval."

SECOND 3 — THE AI UNDERSTANDS

Operating Rule

Trigger: Dispatch

Condition: Payment approved

Scope: Company-wide

SECOND 10 — THE BUSINESS CHANGES

✓ **Rule live across the dispatch workflow.** Every future dispatch now checks for payment approval · the sales & store teams are notified · exceptions escalate to the owner · the policy is filed to the Company Brain.

Not a task — **an operational change, running itself.** That is the difference.

WHY DECISIONOS?

Not a chatbot. Not a clunky ERP. An operating brain.

A chatbot answers questions and forgets. An ERP stores data but won't run your business. DecisionOS remembers, executes, and gets smarter every day.

CAPABILITY	DECISIONOS	CHATGPT & CO.	TRADITIONAL ERP
Permanent company memory	Full — every decision & record	None — forgets each chat	Data only — no context
Turns talk into action	Yes — tasks, records, rules	No — text out only	No — you key it in
Runs workflows & approvals	Yes — end to end	No	Rigid — heavy to set up
Accountability & proof	Yes — owners, proof, trail	No	Partial
Learns how you operate	Yes — Business DNA	No	No
Setup for a lean team	Minutes — just talk	Easy	Months & consultants

WHY DECISIONOS?

DECISIONOS

One brain. Every input. Total recall.

DecisionOS is a layer of intelligence over your whole operation — turning messy human input into structured, accountable output, and then thinking ahead.

SENSES

Listens everywhere

Voice, text, WhatsApp, PDFs, photos & spreadsheets — the channels your team already uses.

UNDERSTANDS

Reads meaning

Classifies each input, extracts numbers, names & dates, scores confidence, catches duplicates.

ACTS

Gets to work

Routes to the right team, drafts the task or record, assigns an owner, chases, escalates.

ANTICIPATES

Thinks ahead

Spots risks before they bite — cash, stock, delays, overload — and recommends the next move.

Built to be trusted: multi-tenant & isolated per company, role-based access so people see only what they should, and secure sign-in. Enterprise discipline, founder simplicity.

Capture → Execute → Remember.

Every input — a voice note or a supplier's invoice — travels the same intelligent path. This is the spine of DecisionOS.

CAPTURE

Speak it, type it, forward it, upload it. Voice with pause/resume; documents drop in; WhatsApp arrives automatically.

EXTRACT & TRIAGE

Raw input becomes structure. Transcribe, classify, pull fields, score confidence. Sure things file themselves; unsure ones are flagged.

ROUTE & REVIEW

Lands in the right queue. The right manager opens the original file, edits, approves, reassigns — with owner-approval gates for sensitive items.

EXECUTE

Approval creates real work. Tasks with owners & due dates, invoices, payments, contacts, finance entries — generated automatically.

REMEMBER

Everything is filed. Who decided, who did it, the proof, the money — all in the Company Brain.

BUSINESS AT SCALE

One founder. Hundreds of moving parts. **One system.**

A founder makes dozens of decisions a day. DecisionOS turns that torrent into an organised operation — no extra managers, no dropped balls.

FOUNDER · DOZENS OF DECISIONS DAILY

100s

TASKS, APPROVALS, RECORDS & FOLLOW-UPS — CAPTURED, ROUTED, OWNED

DECISION**OS**

ONE AI OPERATING SYSTEM RUNNING IT ALL — 24/7

BUSINESS AT SCALE

DECISIONOS

Where decisions become **done**.

Talk is cheap; execution is everything. Every teammate gets a focused place to work — and you get proof it happened.

My Work

Each person's operational home — exactly what's theirs. Owners get an all-team view with filters.

AI Execution Guides

AI breaks tasks into steps; tick them off and progress updates itself.

Proof of Work

Attach photos & voice notes; reviewers open full-size evidence. No more "trust me, it's done."

Approvals & Handoffs

Pass work with context, request approvals, keep a full activity trail on every task.

Workflows

Multi-step flows — sales-dispatch, purchase-payment — run start to finish.

Follow-up & Escalation

Overdue work chased automatically; blockers escalate before they become fires.

Operating Score & Team Execution: a live company-health score and a leaderboard of who's executing — tap anyone for their stats and an AI performance coach.

Every decision. Every rupee. Remembered forever.

Every decision, approval, task and financial record is permanently stored and instantly searchable — true institutional memory that never forgets and never leaves.

"What did we owe Gupta Traders last month?"

"Who approved the Delhi dispatch?"

"Every decision about pricing this year."

Total recall

Decisions, approvals, tasks, invoices, payments & proof — one connected, permanent record.

Ask in plain English

No reports to build. Ask a question, get the answer from your real history in seconds.

BUSINESS DNA

Every decision teaches the system how **you** operate.

Each captured decision, approval and workflow becomes a data point about how your specific business runs — its rules, its rhythms, its people. Over time, this compounds into your **Business DNA**.

IT LEARNS

Your patterns

Who handles what, which vendors matter, how approvals really flow, what "urgent" means here.

IT COMPOUNDS

Into an advantage

The longer you run on DecisionOS, the more it understands — and the more it can do on your behalf.

Why it matters: Business DNA is the foundation for what comes next — AI Managers and, eventually, an autonomous operation that acts the way *your* company would.

BUSINESS DNA

DECISIONOS

PROACTIVE INTELLIGENCE

It doesn't wait to be asked.

DecisionOS watches the business and speaks up first — surfacing the risk and the recommended action before it costs you money.

CASH FLOW

"₹45,000 overdue to Gupta Traders — due today."

→ Recommends: confirm terms & clear payment.

INVENTORY

"Cotton yarn stock won't cover next week's orders."

→ Recommends: raise a purchase order now.

DELAYED ORDERS

"Delhi dispatch is 2 days past due, no update."

→ Recommends: nudge owner & notify customer.

WORKLOAD

"Dinesh has 5 open, 1 overdue — overloaded."

→ Recommends: reassign or extend.

Every alert is **one tap from action** — turn it into a task, assign it, done.

PROACTIVE INTELLIGENCE

DECISIONOS

Every function, quietly on autopilot.

DecisionOS runs like a set of tireless departments — each watching, organising and advising, so a lean team performs like a large one.

FINANCE

The AI CFO

Snap a bill — AI reads & files it. Live spend, outstanding, assets & inventory, plus a ranked action brief.

INVENTORY

Stock in the open

Track items, quantities & value; purchase bills flow into the ledger and the Brain.

SALES

Nothing slips

Orders, invoices, follow-ups & dispatch workflows captured from a message and driven to done.

HR & PEOPLE

Team & leave

Leave with AI impact-routing, a CRM-lite people hub, and coaching for every member.

OPERATIONS

The daily heartbeat

The CEO Brief gives founders a morning situational report — done, open, overdue, needs-a-decision — while follow-ups & escalations keep the operation moving without you pushing.

Capture. Organize. Manage. Recommend. **Autonomous.**

A five-stage journey — from remembering your decisions, to running the company alongside you, to a business that operates itself.

STAGE 1 — CAPTURE

Turn voice, text, WhatsApp & documents into structured, remembered decisions.

You are here

STAGE 2 — ORGANIZE

Route, assign, execute & file — tasks, workflows, finance & the Company Brain.

Live today

STAGE 3 — MANAGE

AI Managers balance workload, nudge the right people, and close loops with less human touch.

STAGE 4 — RECOMMEND

The AI proposes the next best move — spot the risk, suggest the decision, backed by your Business DNA.

STAGE 5 — AUTONOMOUS COMPANY

Routine operations run themselves the way your company would — you steer the vision.

DECISIONOS

Every business decision —
remembered, organized,
and executed.

That is the promise. One place where nothing you decide is ever lost,
ignored, or left undone.

SPEAK THE DECISION. WE RUN THE COMPANY.
